Active (Under Treatment)	3
Healing / Recovery	3
Resolved / Closed	2
Est. Full Recovery	6–8 Weeks
Total Injury Cost	\$1,720.24

DOCTOR'S CLINICAL NOTES

Dr. Anil Kapoor – Attending Orthopedic Surgeon:

Patient Rahul Sharma was brought to the Emergency Department via ambulance following a road traffic accident on Western Express Highway. On arrival, patient was conscious but disoriented (GCS: 12/15). Primary survey revealed multiple traumatic injuries including femur fracture, rib fractures, and pneumothorax requiring immediate intervention.

Emergency surgery was performed for ORIF of the left femur fracture. Chest drain was placed successfully for pneumothorax resolution. Neurological status improved post-CT scan showing no intracranial hemorrhage — mild concussion diagnosed. Patient was monitored in ICU for 24 hours post-op and shifted to general ward on day 2.

Discharge Condition: Stable. Patient advised strict non-weight bearing for 6 weeks. Physiotherapy initiated. Follow-up scheduled. MLC documentation submitted to police as per protocol.

Estimated Full Recovery: 6–8 weeks for soft tissue injuries. Femur fracture — 3–6 months for complete bone healing.
