Medication Cost Breakdown

IV Medications (Hospital): ₹6,800
Oral Antibiotics: ₹1,200
Pain Management: ₹2,400
Supplements (3 months): ₹1,800
Topical / Others: ₹450
Total Medication Cost: ₹12,650

MEDICATION HISTORY TIMELINE

- 12 January 2024 – Emergency Admission

IV Medications Started

Morphine 5mg IV (pain), Ceftriaxone 1g IV (antibiotic), Ketorolac 30mg IV, Enoxaparin 40mg SC (DVT prevention), Ondansetron 4mg IV (nausea). All administered in ICU.
- 12 January 2024 – Post-Op (After ORIF Surgery)

Ketorolac Stopped – Morphine Continued

Ketorolac discontinued due to GI sensitivity. Morphine continued SOS for breakthrough pain. IV fluids maintained. Antibiotic and DVT prophylaxis continued.
- 13 January 2024 – ICU Day 1

Morphine Tapered – Oral Transition Planned

Morphine dose reduced as pain score improved from 9/10 to 5/10. Transition to oral pain management planned for discharge. Nausea resolved — Ondansetron frequency reduced.
- 15 January 2024 – Discharge

Full Oral Medication Regimen Started

All IV medications completed. Discharged with: Ibuprofen, Pantoprazole, Amoxicillin+Clavulanate, Calcium+D3, Diclofenac Gel, Tramadol PRN, Baclofen PRN. Detailed medication card given to patient.
- 22 January 2024 – Follow-Up

Antibiotic Review Scheduled

Amoxicillin course ends. Doctor review to assess wound healing and decide if extension needed. Tramadol & Baclofen to be reviewed for continuation or discontinuation.

DRUG INTERACTION & SAFETY NOTES

- ⚠️ **Interaction Alert – Ibuprofen + Tramadol:** Concurrent use may increase risk of seizures. Monitor patient. Tramadol prescribed PRN only — avoid simultaneous use unless pain is severe and uncontrolled.

⚠️ **Tramadol – Caution:** May cause dizziness and drowsiness. Patient advised NOT to drive or operate heavy machinery while on Tramadol. Avoid alcohol.

✅ **Allergy Safe:** All prescribed medications have been verified against patient's known allergies (Penicillin, Sulfa, Aspirin). No contraindicated drugs included. Amoxicillin-Clavulanate chosen over Penicillin-based alternatives.

✅ **Renal & Hepatic Safe:** All doses adjusted per patient's normal renal and hepatic function (eGFR: 95 mL/min, LFT: Normal). No dose modifications required at this time.

PHARMACIST & DOCTOR NOTES

Doctor's Prescription Notes (Dr. Anil Kapoor):

Patient Rahul Sharma is being discharged post-ORIF surgery with a comprehensive oral medication regimen. Pain management has been transitioned from IV Morphine to oral Ibuprofen with Tramadol as a rescue option. Calcium and Vitamin D3 supplementation is critical for bone healing and should be continued for the full 3-month course even after symptoms resolve.

Pharmacist Counseling Notes (Mr. Suresh Patel):

Patient counseled on: (1) Importance of taking all medications as scheduled — do not skip doses. (2) Ibuprofen and Amoxicillin must be taken after food to prevent stomach upset. (3) Pantoprazole must be taken 30 minutes before breakfast on an empty stomach. (4) Tramadol is for breakthrough pain only — do not take regularly. (5) Diclofenac gel should not be applied on broken skin or wounds. (6) Contact hospital immediately if any adverse reactions occur.

Next Medication Review: 22 January 2024 during suture removal follow-up visit.
